You have a variety of filters to choose from, which are readily applied to your image. They can be applied to select areas of the image or to the whole image. This section takes a look at a few filters and how to apply them to your own photo. When applying a photo filter, you can choose from a variety of effects to enhance the overall look of the image. Apply these effects selectively or all over the image. ## Enhancing Color You can apply a color filter to your photo by right-clicking the layer (as shown in Figure 1-24) and selecting Enhance > Filter > Adjust Color. The adjustment dialog box that follows appears (see Figure 1-25). Select the filter type as indicated, and then make your color adjustments. The dialog box is based on the best settings selected by the current Filter Gallery preset. This filter can also be applied to a layer's opacity to control its visibility. 40. Choose the brush type The brush type category contains three separate options: Exact, Airbrush, and Spray. Each has different features. They are discussed in more detail later in this article, but for now, see which one you'd like to use.

41. Define the brush size, hardness and soften amount In the Brush Size section, you can choose different brush sizes, from very small to very large. For brushes that are very small, you can set the Size setting to 12 pixels. For larger brushes, try the value between 100 and 400 pixels. These are known as pixel sizes. You can also set the brush hardness of a brush. Hard brushes are harder than soft ones. This is done in the Brush Opacity field. To create a hard brush, pick a value of 200 or more. The Soften amount is a slider for brush softening. The bottom part of the slider controls the airbrush effect. The top part controls the brush stroke. If you want to get rid of the gradient handles that appear when the brush is selected, uncheck this box in the Tool Options section. And if you want to change the brush type, click the Brush Type selector in the Brush panel.

42. Choose a source, destination and blend mode The Process category contains a number of interesting options. In the Source and Destination drop-down menus, you can choose different options for your brush strokes. The Add Alignment Effects drop-down menu allows you to add a slight edge alignment effect to your strokes. The Alignment menu makes it possible to align a path or text to a grid. In this way, you can add a grid to an image or a photo. The Hand Tool controls the brush movement. This is called stroke width. In the Stroke options section, you can control the horizontal size of your stroke. For more details about brushes, refer to the Creative Processes tutorial.

43. Decide how much to paint In the Paint Amount section, you can select the amount of paint that you want to use. This can be between 1 and 100 percent. To control the painting effect, use the Opacity field.

44. Add a brush effect The Brush Effects category contains all the different effects available in Photoshop. It includes styles such as Zig Zags and, of course, Brush and Eraser strokes.

Q: Iterate through JSON object with typescript I have a little problem. I have an AJAX function and i'm receiving JSON. Here is code: `this.loading = true; this.query.item.collection.where({ "previous_cycle": { $exists: true } }).find(previousItem => { this.loading = false; this.products = this.filterResults(previousItem, products); }); this.loading = false; });` As you can see i'm iterating through 'previous\_cycle' to filter results. When iterating through the object i want to be able to access 'name' field. Any Ideas? A: You could use an iteration within the filterResults function: `this.products = this.filterResults(previousItem, products) .map(x => x.name);` This works as x is assigned within the function scope, even after the filterResults function finished its execution.
