In Design Mode the Zoom tool is not available. Data interchange AutoCAD supports a number of file formats, including DWG and DXF. It is also able to read and write some other file formats such as STL, IGES, STEP, STL-DIF and PTC's MasterModel. In AutoCAD LT, 3D DWG and 2D DWG are saved as DWG/PDF, a compressed version of the original DWG format. Accelerators Accelerators are simple commands which are attached to a specific button in AutoCAD. There are many types of accelerators. For example, they can be keyboard macros, which launch a dialog, or AutoCADLISP code, which runs on the AutoCAD engine. A combination of both. There are also x-ref accelerators. These act on a reference axis. AutoCAD also allows users to assign own accelerators to a menu or toolbar. User-defined macros (UDF) User-defined macros are the capabilities of AutoCAD. UDF is an acronym for user-defined function. A UDF is a script that runs within AutoCAD's AutoLISP engine. UDFs are not available in AutoCAD LT. For example, a UDF can be

Complex shapes The capability of AutoCAD to create and edit complex shapes is one of its most appreciated capabilities. This ability is also one of its major drawbacks. Geometric calculation and measurement The GeoCAD and Dynamic

Geometry plugins are extensions to AutoCAD which allow users to do geometric calculations and measurements (e.g. the area of a quadrilateral is defined as the formula $A = L \cdot W$, where A = area, L = length, W = width). This is an advanced feature and requires knowledge of mathematics.
