A drawing is made up of "objects" which may be static (constant) or dynamic (changing every time the drawing is opened or saved). Each drawing can contain many objects. All objects are placed within a drawing space. Any item that can be placed on a computer screen, including tables, text boxes, and forms, is a "drawing object". Files DWG files may have many components, including a file header and other textual information and one or more objects. The components of a DWG file are sometimes referred to by their location in the file, as in the header and footer, but they are also indicated by the extension (file type), which identifies the component. The file header contains general information about the drawing, including drawing version, drawing size, page count, and drawing subject, and allows file attributes to be set. The file header may also contain a drawing layer, and may include other information, such as an automatic change history. The footer usually includes information about the drawing producer and drawing author, and allows the file to be closed. Drawing objects A drawing is made up of one or more objects.
