Three main types of AutoCAD: The Command Line The Ribbon The Dynamic Input Method

Microsoft Excel is a commercial desktop spreadsheet application. Developed by Microsoft, Excel was released for the Macintosh in 1985, and for Windows in 1989. It was the first spreadsheet application to include features such as a user interface, auto-calculating and conditional formatting. A main difference between AutoCAD and Excel is that the former can also include a design and drafting application. The Windows versions of Excel use a grid-based interface, where a user opens a workbook in which a row and column will serve as the workspace. This type of interface is also commonly known as a spreadsheet model. The ribbon interface is used by other applications such as Word, PowerPoint and Powerpoint Presentations, and is more natural to use than the command line. AutoCAD is a commercial desktop CAD application used to create 2D and 3D designs. The application has an extensive set of tools to help designers create architectural, mechanical, electrical and structural designs. AutoCAD is the de facto standard for CAD in many industries and is widely used around the world. Advantages: Ease of use and an intuitive interface High-quality rendering Documented object specification Uses a programmable parameterized system rather than a rigid graphics-based system Autodesk has over 50 years of experience in

the design of scientific and engineering software, creating CAD systems with the same ease-of-use and functionality as AutoCAD for a number of decades. Autodesk Discoverer is an integrated platform for content discovery, collaboration, and business application management. Discoverer helps users discover, collaborate and communicate on their projects, and analyze and manage their applications. The company says that the most important features of the software are: Content discovery Collaboration and communication Business application management Advantages: Analytics and reporting Community Social media integration Disadvantages: Trial versions are heavily discounted

2. Architectural Visualization

Architectural Visualization is a commercial architectural visualization platform, designed for architectural firms. It enables designers and architects to make 3D models of buildings from scratch, edit, animate, scale and visualize these models with various visual materials, styles and effects.

ObjectARX ObjectARX is a C++ class library which can be used to create classes derived from existing AutoCAD objects such as: layers blocks drawings blocksets graphics annotation objects image objects text objects internal parameters The ObjectARX is supported on Windows, Linux and Unix operating systems. Some support software is available for Linux. Linux is one of the few operating systems for which the ObjectARX is supported. ObjectARX can be used for a variety of functions including: Annotation Annotation functions include the ability to annotate multiple drawings at once. Annotation types include text, arrows, circles, ellipses, polyline, rectangles, spline and polygon. Blends Blends allow two or more drawings to be combined into one. Blends can be created from existing drawings or can be created from scratch. Blends can be between any two types of drawings including drawings of any format. Blends can be created to show changes in the data. Examples of uses are a combination of line drawings which show variations over time or a combined drawing of a 3D model and 2D drawing. Calculator Calculator allows access to the tools and features of the AutoCAD software. The calculator functions include: arithmetical functions such as addition, subtraction, multiplication and division formula tools for creating equations based on user input The calculator can be used to create letters, text, splines and so on. Connect The Connect function allows a drawing to be linked to a file or database. The data can include raster, vector and text files, as well as database objects such as tables, forms and reports. Controllers Controllers allow for synchronizing drawings with the CAD software. A controller can be set up to automatically change, for example, parameters, blocks or drawing status. The controllers can be used to synchronize changes between multiple drawings by a user or to automatically

synchronize drawings as part of a process. Database Databases can be used to manage drawings and blocksets. Graphical Function Graphical functions are used to display information on the current CAD database and on the currently open drawings. Graphical functions include the ability to: preview data (not all functions display data; ca3bfb1094

Q: How to escape'(single quotes) to get a json string? I want to pass a JSON object as a parameter to a Perl script: `$ perl -MJSON::XS -e 'print encode_json({ keys => [". $json. "] })'` Can't use string (""") as a HASH ref while "strict refs" in use at /usr/local/share/perl/5.14.2/JSON/XS.pm line 953. I tried this: `$ perl -MJSON::XS -e 'print encode_json({ keys => [' \\\' . $json. "] })'` Can't use string (""") as a HASH ref while "strict refs" in use at /usr/local/share/perl/5.14.2/JSON/XS.pm line 953. But I am not getting it. The object is passed to a Java script:
`parameters.add(new BasicNameValuePair("json_obj",
JSON.toJSONString(new JSONObject(json))));` A: Try this: `perl -MJSON::XS -e 'print encode_json({ keys => [". $json. "] });' {
