Change your drawing's size based on the model size and type by using the Markup Assist command. When you're finished, automatically rescale your drawing to the model size, with no need to redraw or resize the drawing. (video: 3:00 min.) PDF Export for 3D: Automatically export layered PDFs with 3D extrusions and layers into a single PDF file. It's a quick and easy way to share your designs with others or share an STL file with an

online 3D-printing service. (video: 0:43 min.) Backup your drawing automatically to a compressed file. AutoCAD saves multiple versions of your drawing and archives them in the same folder. The ability to back up your drawing and continue working on a backup version enables users to work and draw on one file, then create another one later if it gets lost. (video: 1:10 min.) Dynamically Reorder Layered Panels: Automatically rearrange the layers of an

image or drawing based on the layers in your drawing, or the layers of a model. (video: 2:50 min.) Selection Encapsulation: Selection encapsulation, a new feature in AutoCAD 2.6, allows you to select any shape within an object or multiple objects and encapsulate it to a single shape. This feature lets you convert a complex figure into a single shape in your drawing, which simplifies the drawing and reduces the number of lines. (video: 1:30

min.) Paintings and Renderings: Create quick, interactive renderings. With the Paintings and Renderings commands, you can create interactive renderings of your 3D models. Each painting is automatically embedded with the option to place objects from your drawing in the model. The renderings are similar to 3D environments in design tools like 3ds Max and Maya. (video: 1:50 min.) Pin and Sticky Layer Creation: Create pin and sticky layers,

which are groups that keep drawing elements together on one layer. Create different pin and sticky layers for different views of your models, or for different groups of objects. (video: 1:05 min.) Create annotations and overlays on a drawing or model. Annotations can indicate information and comment on specific layers of a drawing or model, such as a show-cause analysis or schedule of
