The first mission in the AAA Game - Ace Combat™ 7: Skies Unknown, MiG-35D Super Fulcrum SE is a fighter interceptor of the Russian Air Force that can withstand high temperatures of the jet engines. Armed with thrust-boosting engines, powerful ordinance, and advanced avionics, the MiG-35D can confidently match the performance of any contemporary fighter jets. Each MiG-35D Super Fulcrum has been beautifully recreated with high-resolution assets and meticulously rendered in the game engine. Now, you get to fly this impressive Russian fighter jet in Ace Combat 7. There are 4 beautiful missions for you to play; Birds of a Feather - A group of zoos are trying to move the penguins to another location due to construction of the new zoo. Be able to correct any mistakes by using your aircraft to give the penguins a place to stay. Carefree Coaster - A group of sailors are flying a yacht to a rendezvous in the Mediterranean. You must help them get the yacht to a safe port. Operation: Snoopy - A picture-perfect island has been designated as a "Sanctuary" for these anthropomorphic dogs. In order to reach this destination, you'll need to make sure the yachts don't get run over. Tail Wind - An incredibly rare breed of penguins have been taken by an unscrupulous zookeeper. Go through the penguin sanctuary and rescue these special critters. Features: - Realistic weapon handling - Realistic controls give you the sense of actually being in the cockpit of the aircraft. - Intuitive graphics and controls - The game uses the same controls and camera angles that are used by the actual jet and make it more intuitive to play. - Immerse yourself in the largest cockpit in the world - The game engine of Ace Combat 7: Skies Unknown pushes the boundaries of what an actual jet cockpit can be. In order to ensure the immersion and authenticity, the pilots are actually seen in the cockpit. - Air-to-air and air-to-ground combat - After years of stagnation, our fighter jets are getting better. The MiG-35D Super Fulcrum SE is the latest iteration of the Russian MiG-35 fighter jet. - Realistic radar - Radar can be used to pinpoint enemy planes and has advanced radar signature algorithms that allow you to see enemy planes through the fog and rain. - Over 1000 of aircraft - This game will

Metropolis Lux Obscura is an action RPG game set in a dead metropolis in the future. New Metropolis is accessible via Project Teleporter, a device which allows entering and leaving to other cities. And... According to the map I found before I left Metropolis Lux Obscura, there used to be a huge swamp, which now flooded the city. So, in the swamps, there were all the special monsters and bosses. With Teleporter, I was able to enter those areas. All the game is set in the present day. It's just that I traveled a long time in the past. The objective is to defeat the bosses of the different cities in order to open the locked doors of the labyrinth. You will find dungeons to explore in every city, and you can acquire new spells or switch the abilities of the character. You can save your progress and put it all back to a previous save. You can create two parties, use them, and share them with your friends. You can recruit new party members with your own or with friends' coins. You will only have a party for a time. If you save your progress, you can still go on to fight against a new boss. You can lead your party through dynamic battles, called encounters, which last a few moments. It's possible to hire heroes to aid your party, which will give special abilities. Such heroes include skilled archers, soldiers, and wizards. There is a small variety of monsters to encounter. However, they are similar for all cities, and you won't find much variation in the story or the general gaming experience. During the game, you will visit many catacombs in every city. It's possible to enter them if you find a key. Inside the catacombs, there are bosses and enemies. For example, in the catacombs of Glutton City, there are dangerous creatures called lemures which are attached to corpses, and they teleport you from one dead body to another. In other words, they jump as high as the corpses they are on. It's possible to dodge their attacks. As the catacombs in the different cities are identical, the catacombs of Glutton City are a bit similar to those in Villanueva in the original version of Metropolis Lux Obscura. Inside the catacombs, you can find... * Shelters to stay alive for a long period of time c9d1549cdd
