Cooking is a process for preparing food so that it tastes good to the consumer. There are several approaches to cooking; they include techniques such as baking, boiling, grilling, sautéing and steaming. Some types of cooking, such as frying and oven baking, use fats as a medium to produce food. There are many different methods of cooking, and many consider a wide variety of cooking practices—such as poaching, pickling, and canning—to be traditional cooking methods. Cooks have recorded history since the invention of the first pot. Cooking became an activity associated with the roles of women and servants. With the advent of the industrial revolution, the separation of household labor into male-female roles and job specialization led to the development of mass production of cookware, especially after the second world war.[1] Many of the techniques for cooking have changed little since then. While family members used to prepare simple meals together from whatever was on hand, the widespread adoption of processed foods has led to a separation between labor in the home and the labor in the kitchen. The modern chef prepares meals from the results of research and testing. Food is often produced under refrigeration, to maximize shelf life. Pasture raised livestock and home-grown crops are often bought to extend the shelf life beyond the limited fresh market window. Cooking is an important element of civilization. In much of the world, food has been essential to survival. In many countries, the preparation of food takes up an area of specialization among workers that involves a large number of people. The term 'cook' used in the modern sense has become a generic term that covers a broad spectrum of occupations which may include cooks, cooks-at-home, food industry workers, food preparators, food service workers, chefs, food preparation instructors, caterers

and bakers. This definition covers not only those who prepare food directly for consumption, but also those who prepare foods that are intended for use by others, for example: cooks of sauces, who make sauces for use in a particular recipe, a caterer who plans a menu to be served by a restaurant chef, or a baker who supplies cakes for a wedding. Essential elements Quality, safety, and nutrition are central aspects of cooking. Food should be safe for consumption. Standardized testing is used by various governments and international bodies to ensure product safety, for example, food additives, manufactured or imported foods, safety of food ingredients and 0cc13bf012

Dendritic cells and regulatory T cells cross-talk to negatively regulate peripheral tolerance of CD4(+) T cells. Dendritic cells (DCs) induce T-cell activation and induce peripheral tolerance by inhibiting T-cell responses. However, it remains largely unknown whether DCs suppress peripheral tolerance via cross-tolerance and what is the underlying mechanism. In this study, we found that DCs induced by Sp1-driven dendritic cells (Sp1-DCs) were more potent than conventional dendritic cells (c-DCs) in inhibiting CD4(+) T-cell proliferation through cell-cell contact. Further analysis showed that Sp1-DCs but not c-DCs could deliver sufficient amount of epidermal growth factor receptor ligand-binding protein to CD4(+) T cells to activate the PI3K-Akt pathway in CD4(+) T cells, which led to T-cell apoptosis by up-regulation of Fas ligand. Most importantly, our data demonstrated that Sp1-DCs could suppress the proliferation of naive CD4(+) T cells by cross-tolerization, which resulted in inhibition of CD4(+) T-cell polarization into Th1 and Th17 cells. These results provide the evidence
