Hello All, I am new to stack overflow but I wanted to ask the following... I have 2 simple functions called firstFunction() and secondFunction() - I create 2 instances of objects called obj1 and obj2 (instances of my two classes) and then call the methods of obj1 first (simulating some processing of that instance) and then the method

of obj2. I have noticed that the state of both instances can be affected by the other call. For example, obj1[0] = null (after calling firstFunction()) but obj2[0] has the right answer. There is no call to obj2[0] after firstFunction() so I'm wondering how this is possible.

I hope this is enough information to reproduce the problem I am having.

I've tried posting this as an error message instead of a question but it didn't allow me to proceed as I haven't filled in all the required info.

A: The problem is very likely that you are using std::vector. vector is

basically a linked list so each element of the list will be valid until the vector deallocates them. That means that

even after the first call to obj1[0] = null;, the second call to obj2[0] will read what obj2[0] used as the value of obj1[0].

Q: Varying data return in sum when querying a table and

showing rows where the sum of the

values is less than or equal to I have a very specific SQL query that needs to

be rewritten. It's a very large

database, so writing a query out and

trying to test it until it returns the

right values is not an option. The

SELECT has three tables. tblSales -

Contains Sales transactions for an

individual (salesperson).

tblTransactions - Contains the

transaction details (productID,

quantity, Total) tblSalesPersonAssoc - Contains the details of an individual's Sales transactions (IncentiveID, saledate). The salesperson_ids are also in tblSalesPersonAssoc (IncentiveID is a foreign key that relates to the id in tblSales) I want to return rows in tblSales for all Sales transactions for a given Salesperson with the condition that they have not gone over their annual incentive threshold. The incentive threshold needs to be varied by the first three months of the year.
