I get numerous user reports about animated portal tiles being missing after upgrading OneUI for Android 8.0 (Oreo). This article will explain what happened and how to fix it. I had been avoiding installing this update, for what seemed like good reasons - yet I have to admit that there were a few moments when I was a bit disappointed to finally upgrade. However, today's article will demonstrate that I must have been wrong, this is a fast, smooth, and power-efficient device that has a lot to offer, both in its looks and its performance. The Update As the Android 8.0 update was installed, I figured that it would cause some sort of problems. But it, as usual, was easy to correct. Once it was fixed, I clicked on 'settings->system->update'. I still managed to gain

nothing, but that's a different issue. The Problems After downloading the Android 8.0 update and the making necessary system changes, I restarted the phone. Not surprisingly, it went straight back to 8.0. I went back to update again. This time it restored the previous Downloaded version without asking me what to do. Interestingly, I went and checked the version number. This time around, I was being asked if I wanted to keep my previous version. Right after that, it asked me to confirm the drop-down, and click OK. This demonstrated the indifference of Google to its users on updating the system. Only then, it installed in safe mode. Safe mode itself did not give anything away - except, perhaps, the fact that I could not interact with the apps - no network, no keyboard, and no mouse. OK, something had been updated because 'settings->developer options' was not a sub-item of 'settings->system', but there was nothing to select. It just said Android Version and Build Number. By contrast, when I enabled 'roaming data', on Settings > Wireless & networks, I found that the 'data network' item was still missing. When I entered the data network settings on this menu, and I checked on the 'roaming data' menu, I found it present. Not only did this mean that I could actually browse the Internet using a mouse! The only other missing item is 'location'. Perhaps it was time for me to leave the safe mode and report back. A New Level of Experience As I said, this is a device that is
