i was having problems updating my drivers so i tried to update my drivers with the drp but it said that i had a newer version of the drivers. i was happy because i could finally update my drivers. the program took a while to update but after that it was really simple to update the drivers. now that i've used the drp, i think i'll be installing it on all of my computers. it really is a handy piece of software. it's worth every penny. even the free version is really good. drp can scan and update your drivers for you. it can download and install drivers that it finds and is updated automatically. drp also has a built-in driver updater that will do the same thing for you. i tried a number of other drivers before i found the drp. i was on my second time trying to update my drivers when i found the drp. i noticed that my first attempt to update my drivers wasn't working and the drp told me that i needed to download a newer version of the drivers. the driverpack solution 17is the latest

version of driver pack for windows operating system. it is the best choice when you need to install and updated latest drivers for your hardware automatically. you have to install all the necessary drivers so that your pc can work properly. he praised how dell has taken care to put together hardware which is entirely supportable with free drivers to ship with ubuntu pre-loaded. according to dell's site they've got two desktops and a laptop for sale in the us which ship with ubuntu. the two desktops only ship with nvidia graphics, and if you didn't already know that means proprietary drivers will be required for full support, then there's nothing on the website to tell you that. i'm typing this on the laptop (a 1420n), which shipped with two proprietary drivers, one for the intel wireless, one for the modem. i assume the need for the proprietary wireless driver will go away with a kernel upgrade at some point, and i don't ever expect to use the modem, so i'm not complaining--it's a fine laptop, and about as free-software compatible as what i could get anywhere else. i can find desktops on

dell's website with intel graphics. so i'm not sure what the criteria were for choosing these two desktops to install ubuntu on (no doubt they had some good reason), but entirely supportable with free drivers can't have been at the top of the list.
