. CFW: [1.1] Allo scoprire il riferimento, e trovare perduto in. A Method to Correlate Single-Particle Distributions from Electron Tomography and Cryo-Electron Tomography. Electron tomography and cryo-electron tomography are techniques used to create three-dimensional images of cellular structures. Although it is possible to image isolated single particles, correlating the positions of the particles within the tomogram can be difficult because of the differing orientations of each particle. To determine the relative position of a single particle within the tomogram, we have developed a new method for correlating single-particle distributions. This approach uses high-resolution atomic force microscopy to determine the positions of fluorescently labeled single particles within the tomogram. The technique is applicable to all electron tomography and cryo-electron tomography sample imaging techniques. Comparative whole-brain CPMG-HARDI with Tract-Based Spatial Statistics: Application to Huntington Disease. CPMG-HARDI of the human brain characterizes white matter diffusion at high angular resolution. In this article, we demonstrate a framework for utilizing whole-brain CPMG-HARDI data in terms of tract-based spatial statistics (TBSS). This framework enables us to incorporate multiple comparisons correction and Bayesian model selection, and it allows us to compare data across subject groups. We introduce three such analyses: 1) probabilistic tractography to find the most likely tracts; 2) voxel-based statistical analysis to find TBSS-suitable brain regions; and 3) group voxel-based statistical analysis. We applied these analyses to data from a cohort of Huntington's disease (HD) patients and matched controls. We show that TBSS analysis of the HD patients' data enables the identification of regions that show group differences between HD patients and healthy controls. Probabilistic tractography analysis allowed the identification of tracts showing group differences, as well as the identification of connections between tracts showing group differences. TBSS analysis showed that connectivity between tracts affected by HD is lower than in healthy controls. This may imply that HD is a disease with an abnormal brain connectome. Q: Javascript setInterval and clearInterval not working as expected I am working on a project where I need to be able to fade in and out a paragraph of text whenever a button is pressed. 04aeff104c
