Is this everything that Final Cut Pro has been waiting for? Nope. In fact, NAB is going to show you the future of editing today! For the year ahead, Adobe Photoshop plans to push new features based on the ever-developing AI movement:

- With the release of its 2023 version, Photoshop is the first batch of Adobe products to incorporate digital assistants like Amazon Alexa and Google Home into its tools. At the moment, they're in the early stages of development, but that doesn't mean you can use this functionality today. For instance, to take action to create a new file based on user input, you'll have to train Photoshop. Working on this will start in the fall.
- Adobe is working on an AI-powered Design School, which will create design-oriented educational content. This isn't like the free Design Academy where you can build a portfolio by using the software. Like other AI-powered initiatives from Adobe, it will be a paid subscription service with specific learning modules on topics ranging from animal to medical illustration.
- We're also seeing AI assistants like Adobe Sensei further develop in 2020. Adobe is working on Adobe Sensei, a visual editor powered by AI that helps create the visual magic in your images and videos. It's currently in the prototype stages, but the intention for it was to roll out in the fall for the software. By bringing this into Photoshop, it's easier to integrate this and other AI-based tools.
- AI isn't just for the photo editing apps. Adobe is also working on visual design apps, like Face Illusion, Adobe Color the ability to alter the contrast of an image, and Adobe Sketch. All this comes to a version of Photoshop in the fall.
