In addition to the preview showing the backside of the image, it took so long to load the image, that it slowed down my computer. The image loading process window displayed the status while loading. It took almost two minutes to load the images from the catalog. These may be annoying when you only intend to quickly check out the appearance of the image, but if it is a library or a long-term project, it is a real nuisance to find the image loading stopped when it got to the end. Most of the images come with the new ones can be accessed via the " Backup Catalog" button. And it's really hard to understand how to do it. Furthermore, it also does not work for the new images. You can access Import from the Develop module and have it imported into the original folder and all subfolders. This is a nice, faster way to import images than before. The new format conversion service can copy both the file format and the embedded metadata to another folder. The information conversion is complete now, but I could not find a way to delete the original files, and they end up in the new archive, which is certainly something you don't want.
