In addition to the new Share for Review tool, you can now create a link to a version of the photo, which you can share with others via email, text message, or with the new desktop app for iMessage. The iOS version of Lightroom now has more filters for mounting a RAW file. Also related to RAW, there's new tools for editing the file itself, such as adjusting white balance. There's also Auto Fix, which snaps the white balance to the brightest location in the image. The iOS version also offers freedom for RAW files to have different color inflections, varying degrees of sharpening, and adding graininess. The current iteration of Photoshop Elements 9 has added a new feature to the Express Editions Deluxe and Standard versions: Rich Tone. The idea is similar to *UnsharpMask*, and that's pretty much the only similarity. Rich Tone is great for getting a precise edge enhancement, but it comes at a higher price point. The Express Editions Deluxe and Standard versions offer 10 text layer styles and 15 layer styles; regular Photoshop Elements Deluxe and Standard offer 8 text layer styles and 10 layer styles. Conversely, there are options and features in the Express Editions versions that are unavailable in the full-version. For example, advanced layer styles that allow text and shapes to be placed atop each other in a single image and easily transformed to bring text to life are only available with the Standard version. Perhaps the full-version will add Rich Tone to the Express Editions versions soon. I hope so.
