So I'm a little late ... but anyway, it seems like I have a new camera and since I'm a guy, most of the time is taken on seeing how it works, and now this Nikon has a new young rival for the film-dweller. Before downloading and using Adobe Photoshop Lightroom (five 2.0), I had to wait to the reviews of Lightroom 5.2 ... so here it is! The first impression is that Lightroom 5.2 seems to be a really speedy application, very pleasant and looks modern! And the interface is easier to understand than in version 4 in my opinion. However, how about the support for the hardware! On the other hand, I made a test, I opened a raw

file created on my D5100, I took a window to decide but, I noticed that the RAW file was saved in TIFF format. I do not know exactly why Lightroom doesn't save my RAWs files as.DNG. I must have done something wrong and I am studying. Anyone have any ideas?

But still, the eye opening statistic is still a reminder that this is a company with an enviable track record. One of one of the richest tech companies in the world, perhaps, the company has also found its solid foothold in publishing. Although Microsoft would probably take a lot of the credit - with a \$26 billion takeover in 2018 many have joked that the company has now surpassed the industry giant in both market and revenue share. Adobe has expanded its developer community, recently announced the next iteration of their

Photoshop line - with a focus on delivering on the company's blurring between the designer and the developer, make products that are built using the APIs provided by a brand new universal runtime. This could also be a hint that they could be working on some of their mobile-first applications. It's all about appealing to a broader audience, and with the set to continue delivering on that sales target as Windows and Mac run through the 20th anniversary year in 2020, perhaps they'll even look for further development on iOS, Android and potentially some other platforms - after they've released a standalone version on iOS. this cool new feature works. With adoption of the web using responsive design, the world of the Internet is often breaking and reframing what is possible in software. That's why, while Photoshop CC desktop is an incredibly powerful application, it's actually constrained by the boundaries of a desktop application, and isn't always the best fit for graphics on smaller screens.
