ABOVE: This is a scene created with Adobe Photoshop Elements on the iPad Pro 9.7". **BELOW:** A similar scene created with Photoshop using the same settings and elements. The opacity on the PSD file makes it easier to compare the two photos. The **Adobe Photoshop Elements** app is feels clunky. You can save in a variety of formats, such as JPG and PSD, but it is a tough program to use for most people. If you are new to the world of graphics, or have little experience, you will not be able to use it.

The **Adobe Lightroom** app on the other hand, is easy to use. Its interface is very easy to navigate, and the user manual is very detailed and helpful. After having used Lightroom for pics, Elements with the new "Photos" module is something of a disappointment. It doesn't seem more capable than Diana's existing "Photoshop." I think Elements could benefit from an updated "Social" module that provides easy-to-use sharing systems that help you organize and share your photos and videos. I find Elements 15 a welcome improvement. Other features include the New Grayscale Adjustment Layer, which lets you modify grayscale images and adjust their tone and color. The new multi-tap editing mode makes editing multiple images a snap. And there's now a way to edit your Photoshop files on the go. You can use the new Adobe Live Sharing and Adobe Content Picker for file-based exports to the cloud.
